Help Us Make an Impact

‘Tis the season for TCFSWG to work on gathering funds and resources for upcoming seasons so that we can continue to provide property owners and communities with wildfire risk awareness and mitigation resources. You can make a difference in our community! Please consider helping us keep up the good work with your tax-deductible donation.

Don't forget your maintenance!

Don't forget that ongoing maintenance is important at your home - keep those gutters clean, small trees cut, and trees pruned up.

Grass and Shrubs Burn Too

While it may be common to think about wildfire risk being elevated for homes located in the forest, don't forget that grass and shrubs can also burn intensely. Our grant projects have historically been focused on thinning small trees, but our fuels specialists can give you advice about all vegetation in and around your home, including sagebrush and grassland ecosystems. You can also be at risk within city limits – embers can be thrown miles in advance of a fast-moving fire on a windy day. Learn more by applying for a free home assessment today!
